Writing For Engineers 33236

Rhetorical Analysis Reflection

For my rhetorical analysis, I decided to analyze a lab report about bone regeneration using electrospinning. I intended this analysis to sound informative because I am informing readers about how this lab report follows the basic format of a lab report. The audience for this report is people who want to know if the lab report will be a reliable source of information. The purpose of this analysis is to make sure that the lab report I am reviewing follows the basic structure of a standard lab report.

When writing this analysis I made sure that I defined all the elements to a lab report and then showed how this lab report follows the rules for each element. I also gave my own opinion on how a certain part of the lab report like the Introduction could be more useful if the terms had simpler abbreviations to make it easier for readers to follow. I made sure to show examples from the lab report to give the readers an example of what parts of the lab report are done correctly. I also made sure that I cited all the information I got from the textbook so the readers know where I am getting some of my information from and so I give credit to the writers of the textbook.

This analysis was a very good way to improve my writing because it had to be more professional since I had to review a lab report. The textbook was very useful in informing about how the lab report should be formatted and gave great details which were easy to follow. Also talking to my peers during class and reviewing each other's papers helped me understand what I was doing right and what I needed to improve on in my writing.
